                                                                                                                                                                                                                                                                                         --- FUNCTION: Transferring are iron binding transport proteins which can bind two Fe(3+) ions in association with the binding of an anion, usually bicarbonate. It is responsible for the transport of iron from sites of absorption and heme degradation to those of storage and utilization. Serum transferrin may also have a further role in stimulating cell proliferation.

--- SUBCILIULAR LOCATION: Secreted protein.

--- SUBCILIULAR LOCATION: Secreted by the liver and secreted in plasma.
--- TISSUE SPECIFICITY: Expressed by the liver and secreted in plasma.
--- MISCELLANEOUS: The peptidase $60 domains do not have protease function as the catalytic residues are missing.
--- SIMILARITY: Belongs to the transferrin family.
--- SIMILARITY: Contains 2 peptidase $60 domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NON_TER

                                                                                                                                                                                                                                                     SUBUNIT: Monomer.
SUBCELLULAR LOCATION: Secreted protein.
TISSUE SPECIFICITY: Expressed by the liver and a miscellaneous: The peptidase S60 domains do not function as the catalytic residues are missing.
SIMILARITY: Belongs to the transferrin family.
SIMILARITY: Contains 2 peptidase S60 domains.
                                                                                                                                                                                                                                                                                                                                                                                                               FUNCTION: Transferrins are iron binding transport proteins we can bind two Fe(3+) ions in association with the binding of anion, usually bicarbonate. It is responsible for the transpiron from sites of absorption and heme degradation to those storage and utilization. Serum transferrin may also have a frole in stimulating cell proliferation.

SUBCELULAR LOCATION: Secreted protein.
TISSUE SPECIFICITY: Plasma.
TISSUE SPECIFICATE: Plasma.
PTM: N-glycosylated.
MISCELLANEOUS: The peptidase $60 domains do not function as the catalytic residues are missing.
SIMILARITY: Belongs to the transferrin family.
SIMILARITY: Contains 2 peptidase $60 domains.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Claim 4; SEQ ID NO 1; 21pp; German.

This invention describes a novel antibody that, in aqueous solution, blinds selectively to carbohydrate-deficient transferrin (CDT) without having to bind CDT to a solid phase. The invention also describes an antibody that binds selectively to CDT at regions containing the sequences VVARSWGGKEDLIWELL, TTEDSLAKIMNOSADAMSILDGGF, SKLSMGSGLNLSEEN and YEKYLGEEVVKAV (ADG46075-ADG46079) and an immunoassay for detecting CDT using the antibodies of the invention. The antibodies of the invention are monoclonal, specifically from hybridomas DSM ACC2540 or 2541. The antibodies are obtained by immunisation with non-glycosylated transferrin, or a fragment, then generation of hybridomas by standard fusion of spleen and myeloma cells. Hybridomas are then selected for

Best Local (
two isoforms with different glycosylation patterns. The assay involves contacting a sample containing the protein with a proteolytic enzyme, followed by detecting the content or relative content of at least one peptide fragment produced by proteolysis. Also described is a kit for the assay method comprising the proteolytic enzyme and a substrate bound specific binding partner (S1) for at least 2 of the isoforms of the proteins. The method can be used for assaying isoforms of proteins according to their glycosylation pattern to determine their concentration or relative concentration in the sample or material (e.g. blood). The method avoids use of antibodies for distringuishing between glycosylated isoforms of the proteins. The present sequence represents a transferrin peptide fragment which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          production of antibodies that specifically bind CDT from the aqueous phase. The antibodies are useful for diagnosis of alcoholism, CDT, which lacks glycosylation at Asn413 and/or Asn 611, is present only in alcoholics. The antibodies allow direct detection of CDT in solution, eliminating the need for immobilising it on a solid phase (as required when using known antibodies). ADG46075-ADG46094 represent CDT peptide fragments used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Assay for differentiating protein isoforms to determine their concentrations in sample e.g. blood, involves contacting the sample with proteolytic enzyme to produce peptide fragment by proteolysis followed by
                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes an assay for a protein having

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                    The present invention describes an assay for a protein having at least two isoforms with different glycosylation patterns. The assay involves contacting a sample containing the protein with a protectytic enzyme, followed by detecting the content or relative content of at least one peptide fragment produced by protectysis. Also described is a kit for the assay method comprising the protectytic enzyme and a substrate bound specific binding partner (S1) for at least 2 of the isoforms of the protectins. The method can be used for assaying isoforms of proteins according to their glycosylation pattern to determine their concentration or relative concentration in the sample or material (e.g. blood). The method avoids use of antibodies for distinguishing between glycosylated method avoids use of antibodies for distinguishing between glycosylated
                                                                                                                                                                                                                                                                                                                                                                                                         Assay for differentiating protein isoforms to determine their concentrations in sample e.g. blood, involves contacting the sample with proteolytic enzyme to produce peptide fragment by proteolysis followed by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel isolated marker for rheumatoid arthritis selected from one of many (around 400) markers defined in the specification. Rheumatoid arthritis is a chronic inflammatory disorder of the small joints which is estimated to affect 2.1 million people in the United States alone. Current approaches to treat the disease include the use of non-steroidal antinflammatory drugs (NSAIDS), which may reduce pain, swelling and inflammation, and disease-modifying anti-rheumatic drugs (DMARDS), which act to slow the progression of the disease and avoid further joint injury. These drugs are associated with a number of serious side effects and the search for improved therapeutics is a subject of active research. The marker of the invention demonstrates antiarthritic activity and may be useful in preparing a composition for diagnosing or treating rheumatoid arthritis. The current sequence is that of a human rheumatoid arthritis marker peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated marker for rheumatoid arthritis, useful in preparing composition for diagnosing or treating rheumatoid arthritis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a novel method for analyzing a mixture of proteins. The method involves selecting sets of peptides from several peptides, sequencing one or more portions of the peptides in two or more sets of peptides in two or more sets of peptides, to produce a data set, and determining the likelihood of the presence of two or more proteins in the mixture of proteins based on two or more data sets. The invention further comprises an article of manufacture comprising a computer-readable media with computer-readable instructions for carrying out the method. The method is useful for analyzing a mixture of proteins. The method is useful for scheroling and characterization of protein mixtures. This sequence represents a human serum abbumin (HSA) peptide fragment used in the novel protein analysis method of the invention.
             A composition for diagnosing, preventing and treating cancer (e. prostatic, renal or uterine cancer) comprises 161P2F10B polynucl

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to a novel composition which comprises a substance that modulates the status of a novel protein (1612F10B) and its variants having a sequence of 875 amino acids provided in the specification. The protein of the invention is over-expressed in certain cancers. The compounds of the invention may have cytostatic activity and the sequence of the 1612F10B protein, and the gene which encodes it, may be useful for gene therapy or the development of a vaccine. The composition and methods of the invention are useful in diagnosing, preventing and treating cancer. The present sequence is the amino acid sequence of peptide derived from the human 161P2F10B variant 3 protein and used in the exemplification of the invention.
          The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, stroke, atherosclerosis, or septicaemia. The present sequence represents a tFVIIa peptide antagonist of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    tissue Factor VIIa; tFVIIa; chronic thromboembolic disease; fibrin formation; vascular disorders; deep venous thrombosis; arterial thrombosis; stroke; atherosclerosis; septicaemia.
                                                                                                                                                                                                                                      New peptide, useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, and

CC dimensional array of features. The method can be used for screening, cd dimensional array of features. The method can be used for screening, cd diagnosis and prognosis of RA in a subject or for monitoring the effect cof an anti-RA drug or therapy administered to a subject. The method comprises: (a) analysing a sample of serum or plasma and optionally comprises: (a) analysing a sample of serum or plasma and optionally comprises: (a) analysing a sample of serum or plasma and optionally comprises; (b) identifying at least one chosen comprises and (c) comparing the abundance of each chosen feature in the sample with the abundance of that chosen feature in the presence or sample with the abundance of that chosen feature in the sample of the chosen feature in the subject. The method can also be used in clinical studies for testing drugs for therapy of RA, for purification of RA-compositic protein isoforms (RPIs), and for production of antibodies to RPIs. The RA-diagnostic feature (RAPIs), and for production of antibodies to compounds that promote or inhibit their activity, which are then used as CC RA drugs. Nucleic acid encoding RADFs can be used in gene therapy compounds that promote or inhibit their activity, which are then used as CC RAY42103 represent expression reference protein isoform peptides and CC LAR425066 to AR225068 represent degenerate probes for RPIs, which are all cc used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

CC nucleic acids and methods for modulating gastric contractility, nutrient CC uptake, growth hormones, secretion of digestive enzymes and hormones. The CC sequences of the invention are used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate ZSIG33 expression.

CC The nucleic acids of the invention and their complements are used as DNA CC probes in diagnostic assays to detect and quantitate the presence of Similar nucleic acids in samples, and therefore which patients may be in complements are used as DNA CC probes in the production of antibodies against ZSIG33 apptides are used as antigens in the production of antibodies against ZSIG33 and in assays to identify CC modulators of ZSIG33 expression and activity. The anti-ZSIG33 antibodies are used as diagnostic agents for detecting the presence of ZSIG33 in samples (e.g. by enzyme linked immunosorbent CC anti-ZSIG33 antibodies are also used as diagnostic agents for detecting the presence of ZSIG31 in samples (e.g. by enzyme linked immunosorbent CC assay (ELISA)). The paptides and nucleic acids of the invention are used to modulate gastric contractility, nutrient uptake, growth hormones, the secretion of digestive enzymes and/or secretion of enzymes and/or hormones in the pancreas. zsig33-like DNA is used in gene therapy CC and zsig33-like peptide is used in protein therapy. The present sequence cis human zsig33-like peptide, zsig33-gamma peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    άŠΧ
                   The invention relates to zsig33-like peptides (ZS33LP) including zsig33-CCC linker, zsig33-beta, zsig33-gamma, zsig-33-delta and zsig33-epsilon competides and nucleic acid molecules encoding such zsig33-like peptides. CC ZS33LP peptides activate the immune system in boosting immunity to immunodeficiency virus (HIV) patients, in improving vaccines and in communodeficiency virus (HIV) patients, in improving vaccines and in communodeficiency virus (HIV) patients, in improving vaccines and in communodeficiency virus (HIV) patients, in improving vaccines and in communodeficiency virus (HIV) patients, in improving vaccines and in communodeficiency virus (HIV) patients, in improving vaccines and in communodeficiency virus (HIV) patients, in improving vaccines and in communodeficiency virus (HIV) patients, in improving vaccines and in communodeficiency virus (HIV) patients, in improving vaccines and in communodeficiency virus (HIV) patients, in improving vaccines of the communication of the communication of the communication of the communication enhancers for the computation release. They are also useful as research reagents for the computation, good trigger and or the communication, confirmed of the communication and/or confirmed with cast varieties in all or confirmed with cast varieties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

These molecules are useful for treating dysfunction associated with contractile tissues or to suppress or enhance contractility in vivo and to treat gastrointestinal and growth related diseases. ZS31Lp peptides, nucleic acids and/or antibodies are useful for treating disorders associated with gastrointestinal contractility, secretion of digestive enzymes, hormone and acids, secretion of hormones in the pancreas and/or brain, gastrointestinal motility, recruitment of digestive enzymes, inflammation and regulation of nutrient absorption. Sequences of the invention are useful in gene therapy. The present sequence is human zsig33-gamma peptide
The invention relates to an isolated pro-apoptotic polypeptide, designated DIABLO, or its biologically active fragment of 8 amino acids in length. Also included are the polypuclectide encoding DIABLO, expression vectors, transformed host cells, producing a biologically expression vectors, transformed host cells, producing a biologically active fragment of DIABLO (by contacting an inhibitor of apoptosis (IAP) with a fragment of the polypeptide, and detecting a reduction in activity of the IAP), producing a natural or synthetic variant of DIABLO with cell
                                                                                                                                                                                                                                                                                                                  New pro-apoptotic polypeptide, useful for screening for agents which modulate cell death and for treating conditions associated with cell death or apoptosis e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Verhagen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             02-MAR-2001; 2001US-00798116

CC DIABLO in a biological sample (by contacting the sample with an IAP and CC detecting the presence of an IAP/DIABLO complex), modulating the death of CC a cell (by contacting a cell with an agent, which modulates the level CC and/or functional activity of a polypeptide), modulating the death of CC and/or functional activity of a polypeptide), a composition for CC treatment/prophylaxis of a DIABLO related condition comprising an agent which reduces the level/activity of a polypeptide or DIABLO, or a CC nucleic acid encoding DIABLO, is useful for screening for an agent which CC modulates cell death. An antigen-binding molecule is useful for detecting CC DIABLO in a biological sample. The agent which modulates the level and/or functional activity of a polypeptide comprising mature or pro-human CC DIABLO polypeptide, is useful for the treatment and/or prophylaxis of a condition associated with expression or activation of DIABLO, such as CC cancer, vascular disease, hepatic disease, autoimmune disease and CC neurodegenerative disease, hepatic disease, autoimmune disease and CC associated with heart attack, or hepatic tissue damage associated with a CC conditions associated with cell death or apoptosis. The present sequence CC represents a partial peptide sequence from human DIABLO, which co-cc procipitates with the human IAP protein MIHA (not defined)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ई
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FX8X5555555555555555555555555555555
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to novel zsig33-like peptides (I), which Care produced by peptide cleavage from the C-terminal end of zsig33. Casig33 has homology to motifin and has been found to be transcribed in the gastrointestinal system. The zsig33-like peptides and coding Casequences are useful for modulating gastric contractility, nutrient cuptake, growth hormones, the secretion of digestive enzymes and hormones, and for hormones in the pancreas. They are also useful for treating diseases and conditions associated with bone formation (e.g. osteoporosis), immunity, obesity and metabolic disorders, dwarfism, wound healing, reproduction, as well as conditions associated with stress, kidney and lung dysfunction, aging and elderly, including, compared strength, bone fragility and skin thickness, and neuroendocrine activities such as sleep. They are also useful for treating inflammation, diabetic gastroparesis, infectious disease, HIV, bacterial or viral inmune response. The present sequence is one such zsig33-like peptide of length securing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Best Loc

This invention describes a novel protein construct comprising a LacI repressor peptide and a His3-20 linker peptide sequence or a LacI repressor peptide (AEF38804), its functional variant and a linker per AEF38810) adapted to bind to support surface. The invention also describes; a) a nucleic acid encoding the construct; b) a vector comprising the nucleic acid and c) a kit comprising the construct in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       E. coli LacI repressor hinge region SEQ ID NO
                                                                                                                                                                                                                                                                                       Novel protein comprising LacI repressor peptide and sequence, useful for purifying DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        03-JUL-2004; 2004GB-00014987
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  08-MAR-2005; 2005WO-GB000888

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC lyophilized form and a support surface. The construct comprises a fusion CC protein, in which the LacI repressor peptide is fused, and thus CC functionally bound to the linker peptide. The LacI repressor peptide CC comprises an NH 2 -terminal headpiece (AEF38806), a hinge region CC (AEF38807), an inducer binding domain (AEF38806), and a COOH-terminal CC helix (AEF38809). The construct also comprises a reporter protein CC (AEF38813). The product of the invention is useful for purifying DNA CC comprising at least a region of lacO operator or its variant which CC comprising at least a region of lacO operator sequence CC with the construct to form a DNA/protein complex, attaching the DNA from the CC DNA/protein complex to a support surface, and eluting the DNA from the CC DNA/protein complex. The DNA to be purified comprises a) at least one of CC lacOl, lacOl sites, or its derivative or variant; b) is contained CC in a plasmid or a crude cell lysate. The support surface is adapted to CC bind to the construct and comprises a porous resin. Eluting is carried CC with an allosteric inducer of the LacI repressor protein (e.g. isopropylbeta-D-thiogalactopyranoside or allolactose) in conjunction with salt. CC prior to the elution from the support surface. The construct allows rapid CC and effective isolation of highly pure DNA, and is cost effective. This sequence represents the E. coli LacI repressor protein hinge region, used to make the construct LacI-His6-GFP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

New antibodies to cytotoxic lymphocyte maturation factor - useful for detecting, purifying, and/or blocking proliferation and activation of cytotoxic T cells, such as in transplantation(s).

Example

3; Col

23; 71pp; English

An isolated antibody has been developed which binds specifically to cytotoxic lymphocyte maturation factor (CLMF) and neutralises CLMF induced proliferation by more than 50% in a CLMF dependent T cell growth assay and/or inhibits binding of at least 60% of the factor to phytohaemagglutinin (PHA) activated peripheral blood lymphocyte (PBL) blasts as determined in a CLMF receptor binding assay. CLMF is a chetrodimeric protein having a molecular weight band of 75 kD, determined by sodium dodecyl sulphate-polyacrylamide gel electrophoresis (SDS-PAGE) under non-reducing and/or reducing conditions, providing a first subunit having a molecular weight band of 40 kD and a second subunit having a molecular weight of 35 kD. The present sequence represents a tryptic 40 kD CLMF peptide off polyvinylidene difluoride (PVDF), from an example of the present invention. The antibady can be used for the purification chand/or detection of CLMF. It is bedy seed in therapeutic treatments which require selective blocking of proliferation and activation of cytotoxic T cells (CTLs) such as in transplantation

                             This invention relates to an adhesive polypeptide derived from domain IV of the extracellular matrix protein perlecan. Perlecan is is a heparin sulphate proteoglycan and is also known as HSPG2. The polypeptide of the
                                                                                                                                                                                                                                                                        New polypeptides derived from the perlecan core protein, useful for strong and selective cell adhesion, particularly as coating for scaffolds for tissue repair, e.g. for treating tooth or cartilage defects, or repairing damaged skin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             31-AUG-2000; 2000US-0229222P.

                                                                                                                                                                                                                                            invention allows strong and selective cell adhesion and is useful as coating for scaffolds, e.g. implantable tissue scaffolds. The polypeptide may be coated on matrices implanted in damaged tissue (e.g. bone or cartilage) to increase the adhesion of desirable biological materials to the repair site. The scaffolds are useful for treating tooth and jaw defects (e.g. in cases of trauma, bone loss, tooth loss or gum disease) or cartilage defects (e.g. those that result from rheumatoid arthritis, osteoarthritis or trauma), or to repair defects and damage in skin, burns or ulcers. The present sequence represents a peptide composed of the scrambled sequence of human perlecan adhesion peptide. This peptide was used as a control for cell adhesion assays in the examples of the method of the inverser.
